PROJECTS

StakeFlow — Full-Stack Betting Management and Analytics Platform

Personal Project

- End-to-end development of a web platform for betting management and analytics, including front-end, back-end, database, custom API, and deployment.
- Built a Telegram bot integrated with Google Gemini AI to interpret bets submitted in natural language and automatically convert them into structured data.
- Developed intelligent registration automation: users submit a bet through Telegram, AI processes the information, and the bet is automatically recorded on the platform, reducing manual data entry.
- Implemented bankroll management and performance analytics, including betting history, ROI, results, and metrics, along with testing, validation, and data handling.

PROFESSIONAL EXPERIENCE

Apprentice — Cloudbeds

June 2024 – November 2025

- Provided support to the coordination team and company leadership.
- Organized and coordinated internal activities.
- Participated in meetings and gathered information.
- Met deadlines and completed assigned tasks.
- Applied front-end development knowledge to work-related activities.
